

## Preparing for Your LEQEMBI<sup>®</sup> Infusion

Your referral has been sent to: \_\_\_\_\_

**Call the infusion center at:** \_\_\_\_\_

**The infusion center will call you. If you have not been contacted in 48 hours, please call to ask for an update.**

- **Be on the lookout for a phone call from the infusion center!**

The infusion center may need additional information in order to schedule your appointment. The medication works best when it is given as soon as possible, so if you are unable to answer, it is important to call back right away.

- **Plan your visit with the infusion center staff.**

State your need to have a care partner throughout the appointment and work with the infusion center staff to identify the best time of day for your treatment.

- **Start drinking extra fluids like water prior to your appointment.**

Staying hydrated can help make your veins more easily accessible. If you have been told to limit how much you drink due to another medical condition, check with your healthcare provider before drinking extra fluids.

## Infusion Day Tips

- **Start your day as usual.**

No special preparation is needed before your infusion. Eat a nutritious breakfast, stay well hydrated, and take your usual daily home medications.

- **Wear comfortable clothing and be sure your shirt sleeves can be rolled up to allow access to your arms (and veins!).**

Some people feel chilly during their infusion because the medication is cooler than your body temperature. Dressing in loose layers and warm socks can help.

- **Bring something to keep your mind busy.**

Reading a book, doing a crossword puzzle, or playing games on a tablet will help pass the time much faster than watching the clock.

- **Be prepared to wear a mask..**

You may be asked to wear a mask over your nose and mouth when you are around other people to help stop the spread of COVID-19.
